-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of claims 11-19 in the reply filed on 10/02/07 is acknowledged. The traversal is on the ground(s) that as set forth in 37 C.F.R. § 1.146, a reasonable number of species are permitted in a single application. This is not found persuasive because 37 C.F.R. § 1.146 also mentions that the examiner may require the applicant to elect a species in application with claims to more than one distinct species.

The requirement is still deemed proper and is therefore made FINAL.

### ***Drawings***

1. Figures 1 and should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 11-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted Prior Art (APA) in view of Hashiguchi et al. (6,692,266).

4. The APA as shown in figures 1-2 of the drawings and discussed in the background of the present invention disclose substantially the claimed vibration motor, comprising: a contact spring 10 including: a support portion 13, a contact portion 11 electrically connected to an external power supply terminal, a vibrating portion 30 eccentrically rotating by power supplied from outside through the support portion. However, the APA lacks to disclose at least two bent portions connected between the support portion and the contact portion and having a bent shape.

Hashiguchi et al. discloses a contact spring 3 including: a support portion 3b, a contact portion 3d and at least two bent portions 3a connected between the support portion and the contact portion and having a bent shape (See figure 4, Column 3, line 35 – Column 5, line 17).

Therefore, it would have been obvious to provide the APA contact spring with at least two bent portions connected between the support portion and the contact portion and having a bent shape in view of the teachings of Hashiguchi et al. The use of a contact spring with at least two bent portions connected between the support portion and the contact portion and having a bent shape would provide much better resiliency for the contact spring of the APA. Also regarding the different width dimensions for the different portions of the contact spring as being recited in claims 13, 15 and 19 are only

related to matter of obvious contact spring design which is well known or non-critical features over the APA contact spring.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sato; Zuin; Kroner et al. and Rizzo et al. are further cited to show other contact springs of the prior art.
